

Wang Danping

lvivian1011@gmail.com | Chengdu, Sichuan, China

Education

Chongqing University

September 2013 - June 2016

M.A. in Art and Design

- Concentration in Product Design
- Average mark: **86.5/100**
- Thesis: *A Service-Oriented Approach to the Design of Convenience Facilities in Urban Communities*

National Dong Hwa University

February 2015 - July 2015

Exchange Student in Industrial Design

- Selected for a government-sponsored exchange programme

Chongqing University

September 2009 - July 2013

B.A. Industrial Design

- Cumulative GPA: **3.46/4.0**; Overall rank: **5/50**
- Thesis: *Public Facilities Design: Design of an Intelligent City Information Inquiry Terminal*
- Recommended for postgraduate admission without entrance examination, 2013

Academic Appointments

Chengdu Technological University, Chengdu, Sichuan, China

Lecturer in Industrial Design

2020–Present

Teaching Assistant

2017–2019

Deputy Head, Department of Industrial Design

2020–2022

Selected Research Experience

A Service-Oriented Approach to the Design of Convenience Facilities in Urban Communities

Master's Thesis | Chongqing University | 2016

- Conducted a literature review, in-depth interviews with experienced property-management and residents' committee staff, interviews with resident representatives, and on-site observation to investigate community service provision, facility use, and resident satisfaction in Chengdu.
- Mapped existing service processes and identified key touchpoints between residents, community organisations, and convenience facilities, translating the findings into design requirements and guidance.
- Developed service-oriented product and facility proposals across community mobility, cultural access, local commerce, and ageing support, including shared mobility products, community book-lending facilities, parcel lockers, a health-monitoring wristband, and a home-assistance robot.

***Interaction Design of a Smart Wristband for Urban Older Adults Living Without Their Children
Master's Research Extension | Chongqing University | 2016***

- Examined the physiological and psychological needs of urban older adults living without their children to inform the design of a wearable device.
- Developed a smart-wristband concept connecting older adults, the device and their adult children, with proposed health-monitoring and alert functions to support care and communication.
- Contributed to a co-authored article reporting the design study in *Packaging Engineering*, 37(6), 79–82 (2016).

***Design Research on a Volunteer Service Platform for Tianfu International Sports Events
Principal Investigator | 2023–2025***

- Investigated the service and coordination needs of event organisers and volunteers through stakeholder research and analysis of the volunteer service journey.
- Led a team in developing the research and design process, translating user and organisational needs into service workflows, platform requirements, and design concepts.
- Developed a platform concept and prototype to support volunteer recruitment, training, task allocation, communication, and on-site service coordination.

AI visual inspection and robot design for cigarette box packaging

Participating researchers | 2025–2026

- Conducted stakeholder research to understand user needs and operational requirements for a packaging quality-inspection robot.
- Translated research findings into human–robot interaction requirements and design recommendations.
- Collaborated with an interdisciplinary team to refine the robot's interaction design in the context of factory inspection workflows.

Curriculum and Design Education Research

Research and practice on interdisciplinary teaching reform for the Smart Product Design course cluster under the New Engineering framework

Principal Investigator | 2024–2026

- Investigated interdisciplinary teaching approaches for the Smart Product Design course cluster within China's New Engineering education framework.
- Built an interdisciplinary teaching team with faculty from automation, mechanical design, and related fields, and introduced industry-based design briefs to train students in integrated design development and communication.
- Promoted cross-disciplinary collaboration among industrial design students, students from other majors, and faculty, enabling joint product development that extended beyond styling to functionality, engineering feasibility, and implementation.

other selected Research

Application of flipped classroom methods in industrial design courses | 2018–2019

Industrial design professional studio cultivation models under OBM industrial structures | 2022–2024

Talent training research using interdisciplinary “bidirectional coupling” models | 2024–2026

Teaching & Leadership

Chengdu Technological University

- Teach undergraduate courses including Human Factors and Ergonomics, Design Psychology, Form and Composition, Materials and Manufacturing Processes, and Intelligent Product Design.
- Supervise approximately eight undergraduate students annually in their final-year design projects and theses.
- Lead curriculum innovation under China's New Engineering Education initiative, including interdisciplinary teaching and curriculum development.
- Mentor students for national design and innovation competitions, including the China University Students Industrial Design Competition and the China International College Students' Innovation Competition.

Deputy Head, Department of Industrial Design | 2020–2022

- Contributed to curriculum development, programme review, and revisions to the undergraduate training plan.
- Coordinated departmental teaching activities, student competitions, and the annual graduate design exhibition.

Selected Professional Design Experience

Consultant Industrial Designer

Chengdu Wuyu Industrial Design Co., Ltd. | 2020–2024

- Contributed to the design of health-related and smart-product projects, including an automated air purifier developed during COVID-19 and a self-service rental system for portable oxygen concentrators; the projects received **the 2021 and 2023 IF Design Awards**, respectively.
- Contributed to the design of mobile public toilet facilities for the **Chengdu 2021 FISU World University Games**.
- Additional product-design work included an electronic ear tag recognised with a **2023 Red Dot Award**.

Selected Awards and Honours

- Outstanding Instructor awards in national and provincial student design competitions, 2021–2024.
- Outstanding Graduate Student, Chongqing University, 2014.
- Huang Qianheng Scholarship, Chongqing University, 2011.

Professional Service and Memberships

- Member, Industrial Design Interdisciplinary Teaching Committee, Chengdu Technological University.
- Member, Industrial Designers Societies of Chongqing and Sichuan.
